

## Stellar Anti-Microbial Micro Fiber R U Clean

The R U Clean anti-microbial line of micro fiber is the only of its' kind on the market today. It has been proven that the R U Clean treated towel will kill 99.99% (the highest level that can be achieved) of all single cell organisms for the life of the product. This treatment works as a physical reaction and not a chemical reaction. Why is this important? Other anti-microbial treatments have a chemical reaction that leaches out of the product, this allows "bugs" to build up a tolerance to the treatment and therefore over a very short period of time morph into "super bugs" that are immune to the treatment and the product has lost it's value.

A simple explanation of the R U Clean product is there are millions upon millions of tiny swords covalently bonded to our micro fiber products, these swords pierce the microorganisms as they come in contact with the surface of the product. The "bug" is then drawn down by the negative charge of the sword and with the positive charge of a nitrogen atom it is electrocuted. There is never a chance for survival or a chance to build a tolerance to being stabbed and electrocuted. This coupled with the finest micro fiber available ensures the absolute most sanitary way for you to protect and keep your facility or home clean.

The cell membrane is attracted to the surface and is then punctured by the long molecular chain. The long lasting durability is a result of this physical method of controlling unpleasant microorganisms.

The microorganism is further destroyed by electrocution. Since the Microbe Shield is not consumed to destroy the organism, it stands ready to fight again.
